SUMMARY

Backend Engineer with hands-on experience building multi-tenant SaaS platforms, educational systems, and enterprise business applications using Node.js, TypeScript, and Django REST Framework. Experienced in designing scalable APIs, database architectures, cloud infrastructure, and deployment pipelines. Strong interest in DevOps, AWS, automation, and infrastructure engineering.

SKILLS

Frontend (basic): React, NextJs, Typescript

Backend Development: Python, NodeJS, ExpressJS, Django, DRF, FastApi, Celery, Pydantic

Databases: MySQL, MariaDB, SQLite, PostgreSQL, Redis, Kintone, MongoDB, SQLAlchemy, Prisma

DevOps & Infrastructure: Linux, Docker, AWS, CI/CD, Virtual Private Server (Ahost, Hetzner), Grafana, Cloudflare, Nginx, Apache, PM2, DNS

Tools: Git, RabbitMQ

EXPERIENCE

Backend Engineer, Japan Digital University Coworking Program - Tashkent, Uzbekistan
December 2024 – Present

- Developed and maintained educational and enterprise platforms using Node.js, Express.js, Django REST Framework, and PostgreSQL.
- Designed REST APIs, database schemas, and deployment pipelines.
- Managed Linux servers, Nginx configurations, backups, monitoring, and cloud infrastructure.
- Contributed to multiple production systems, including university management, portfolio management, notification, and SaaS platforms.

Freelance Developer,
March 2025 – Present

- Developed custom web applications for clients using Django REST Framework, Express.js, React, Next.js, PostgreSQL, and MySQL.
- Designed scalable backend architectures, REST APIs, authentication systems, and database models.
- Implemented cloud storage integrations, deployment automation, caching, background jobs, and server infrastructure.
- Delivered projects including an IELTS preparation platform and a B2B order management system.

PROJECTS

Online Library Management System – Fullstack Developer

- Developed a full-featured Library Management and Social Platform for a university with over 1,000 students using TypeScript, Express, Prisma, PostgreSQL, React, and Vite. The system includes role-based access control, book lending and reservation workflows, automated fine management, real-time notifications, and social features such as posts, comments, and reactions. Integrated Kintone Database Service to ensure efficient data management and system reliability. Successfully reduced librarians' administrative workload by approximately 50%.

IELTS Online CD Platform – FullStack Developer (Focus on Backend)

- Developed a multi-tenant IELTS preparation platform using Django REST Framework, Next.js, PostgreSQL, and Redis. Built role-based access control, center and group management, mock exams, homework, quizzes, teacher feedback workflows, real-time chat, notifications, and analytics. Led backend architecture development, implementing schema-based multi-tenancy, tenant-aware JWT authentication, and custom tenant routing to ensure complete data isolation. Improved scalability and reliability through caching, background jobs, connection pooling, and optimized permission management.

JDUPortfolio – Recruiters with Students Platform – Team Lead & Backend Developer

- Developed a role-based portfolio management platform for students, staff, and recruiters at the

Japan Digital University. The system enables students to create and update portfolios, staff members to review and approve submissions, and recruiters to discover and view approved portfolios. As a Team Lead, I was responsible for the platform's infrastructure and backend development. Built approval workflows, draft versioning, change tracking, and role-based permission systems using Express, PostgreSQL, and Sequelize. Integrated Kintone Database Service, S3/MinIO file storage, notifications, and email automation to streamline portfolio management processes. Designed and deployed a production-ready infrastructure using PM2 and Nginx, including maintenance mode handling and automated database backup mechanisms. Improved performance for large datasets through optimized database queries and server-side pagination.

Parents Warning System – Frontend & Backend Support

- Contributed to a parent communication platform that delivers school announcements and alerts through mobile applications, push notifications, SMS, Telegram, and scheduled messaging workflows. Enhanced the administrative portal using Next.js, React Query, and Tailwind CSS while extending backend services built with Express, TypeScript, and MySQL. Improved CSV import/export operations, data validation, notification management, and group administration workflows, helping streamline communication between schools and parents.

Greet – Fullstack Developer

- Developed Greet, a multi-tenant SaaS platform that helps companies preserve and share business entertainment knowledge through a centralized restaurant recommendation system. Built using Next.js, React, Express, TypeScript, Prisma, and MySQL. Independently led backend development, implementing tenant isolation, JWT authentication, RBAC, restaurant reviews, favorites, search, and filtering features. Optimized database performance with indexed queries and pagination, reducing restaurant discovery time to under 30 seconds and maintaining typical API response times below 500ms. Deployed the platform on AWS using EC2, RDS, S3, PM2, and automated deployment pipelines.

Halal Chicken – Backend Developer

- Developed a B2B ordering and product catalog platform for halal chicken products using Django REST Framework, PostgreSQL, React, and TypeScript. Implemented JWT authentication, role-based access control, Telegram integration, order management, session cart merging, and asynchronous XLSX import/export workflows. Improved scalability and reliability through Redis caching, Celery background processing, and query optimization.

Summary App – Fullstack Developer

- Contributed as a fullstack engineer to a corporate learning platform delivering book summaries in text, audio, and video formats. Focused on backend API development using Express.js and frontend implementation with Next.js. Integrated SSO authentication and AWS S3 pre-signed URL workflows to enhance security and access management. Improved application performance and user experience through optimized search functionality using debouncing techniques. Participated in feature development, testing, and production deployment.

CoWork Management System – Team Lead & Backend Developer

- Led backend development of a cowork management system for managing student projects, assignments, profiles, and staff permissions using FastAPI, SQLAlchemy, and PostgreSQL. Designed the backend architecture and implemented REST APIs, JWT authentication, role-based access control, and database models. Managed AWS EC2/S3 deployment and contributed to backend testing with pytest.

EDUCATION

Japan Digital University (JDU), Tashkent, Uzbekistan – IT management (Part-time) (Expected 2027)

LANGUAGES

Uzbek – Native Speaker

Japanese – JLPT N2 (Official Certification)

English – Basic / Pre-Intermediate (No formal certification)
